NILANJANA CHATTERJEE

Senior Product Manager | Product Strategy & Transformation | AI & Data Products | Enterprise Commerce, Healthcare & Fintech

New York Metropolitan Area | 929-317-7373 | nilanjana.chatterjee.pm@gmail.com | linkedin.com/in/nilanjana-chatterjjee | nilanjana281.github.io

PROFESSIONAL SUMMARY

Senior Product Manager with 10+ years leading product strategy and transformation across complex enterprise platforms, digital commerce, healthcare, fintech, and AI. Across 40+ global engagements, has defined product vision, modernization roadmaps, monetization models, and growth strategies, aligning engineering, design, data, commercial, and executive stakeholders around clear priorities, sequencing, and trade-offs.

Known for turning fragmented platform ecosystems into scalable, customer-centered products and journeys: establishing systems of record, integration contracts, access models, and measurement frameworks while changing how teams make product decisions. Has launched 0→1 platforms, AI- and data-driven experiences, marketplace products, and omnichannel journeys that produced measurable revenue, engagement, and operational outcomes.

Currently builds and operates production agentic products and lifecycle automation for a founder-led business, combining product strategy with hands-on depth in LLMs, APIs, analytics, experimentation, and AI governance. MS in Business Analytics; CSPO.

KEY STRENGTHS

- **Product Vision, Strategy & Transformation:** roadmaps, MVP definition, scope and investment trade-offs
- **Platform Modernization & Ecosystem Simplification:** systems of record, APIs, integration contracts, access models
- **AI & Data Product Strategy:** agentic products, personalization, model evaluation, AI governance
- **Growth, Monetization & Commercial Strategy:** marketplace economics, pricing models, lifecycle growth, GTM
- **Customer Journey Transformation:** B2B, B2C, omnichannel, search and discovery, mobile
- **Evidence-Based Product Leadership:** experimentation, north-star metrics, outcome-based prioritization
- **Executive & Cross-Functional Alignment:** engineering, design, data, commercial, C-level
- **Distributed Team Leadership:** oversight and mentoring across the US, Canada, and India

PROFESSIONAL EXPERIENCE

Fractional Lead Product Manager | Product with Pri **March 2026 – Present**

Own product strategy and transformation for a founder-led digital education business as sole product owner, establishing the product operating foundation where no formal product process or dedicated engineering function existed. Unified a fragmented five-platform ecosystem (Wix, Kajabi, Beehiiv, Zapier, Expandi), introduced production AI and agentic automation, and connected acquisition, conversion, onboarding, engagement, and retention into a coordinated customer lifecycle.

- **Transformed a fragmented five-platform ecosystem into a coordinated customer and data architecture**, establishing systems of record, source attribution, lifecycle-state propagation, documented integration dependencies, and decision ownership; roadmap and pipeline restoration contributed to an 8% engagement improvement.
- **Established the business's product decision infrastructure**, turning ambiguous founder objectives into prioritized feature decisions, roadmaps, user stories, acceptance criteria, integration specifications, and interactive Figma and Lovable prototypes, without engineering support.
- **Designed and built an agentic customer-lifecycle engine** spanning segmentation, source attribution, triggered messaging, onboarding, conversion, engagement, and retention, moving the business from disconnected manual execution to coordinated automation.
- **Built the business's production AI products**: a grounded AI coaching agent (documents, transcripts, worksheets, knowledge base) and a multi-model AI Manuscript Editor (Claude, ChatGPT, Gemini). Defined context architecture, source authority, model evaluation, and human oversight; resolved a silent-degradation failure in long-form AI editing by deciding how much authority the AI should have, redesigning around bounded editing, human-in-the-loop review, and change visibility.
- **Used behavioral and funnel data to guide growth investment**, including guest-to-paying-customer conversion (Amplitude), lifecycle messaging, subscription renewals and paywall/authorization mechanics, and paid acquisition (targeting, budget allocation, conversion tracking).
- Diagnosed and resolved an undocumented Wix–Zapier production integration failure affecting nine live lead-capture workflows after Claude, ChatGPT, Grok, and Gemini failed to produce a working solution: Wix runs two parallel form systems and Zapier

surfaces only the newer one by default. Independently traced it to a legacy trigger-string issue and restored the full pipeline at no cost, without rebuilding the stack, in under 15 minutes; published the fix as a public case study.

Product Manager (official title: Senior Business Analyst) | Born Group **July 2019 – September 2025**

Functioned as an embedded, owner-level Product Manager across 40+ global engagements, helping enterprise brands modernize digital platforms, launch new business models, simplify fragmented technology ecosystems, and improve customer journeys across commerce, marketplaces, healthcare, and financial services. Defined product vision, roadmaps, GTM and monetization strategies, and aligned engineering, design, data, commercial, and executive stakeholders from discovery through launch and optimization, often as the sole product decision-maker on the account.

Clients: Converse, Forever 21, Shoes.com, Lucky Brand, Sysco, Iron Mountain, Yamaha Music, CareAllies (Cigna), Fairstone Financial, Lindt, Oreo, Boost Mobile, Delta Faucet, Elémis, Playboy, Orgill, Boston Scientific, Cochlear, Trove, Go Hunt, London Jewellers, ICC (Cricket World Cup), Inspired Education, and other global brands.

Product Strategy, Transformation & Platform Modernization

- Defined product vision, GTM strategy, and roadmaps for replatforming programs across Salesforce Commerce Cloud (SFCC), Shopify, Magento / Adobe Commerce, Spryker, Elastic Path, and SAP Hybris / SAP Commerce, leading discovery, user research, and feature prioritization for global brands across B2B, B2C, and D2C, with accessibility (WCAG) compliance as standard scope on every build.
- Served as embedded, dedicated Product Manager for Forever 21's eCommerce business and mobile-app scope, operating day-to-day within the client organization with direct ownership of roadmap, requirements, prioritization, and delivery.
- Led the 0→1 launch of ICC's first VTEX marketplace during an already-live Cricket World Cup, constraining scope to a truly functional MVP (international vendor onboarding, cross-border ordering, international payments) to launch in 3 weeks so fans could buy official merchandise before the tournament ended; authored the architecture, merchant-onboarding, catalog, and multi-seller documentation that set the standard for later VTEX deployments.
- Defined marketplace monetization strategy for the Iron Mountain Spryker marketplace: decided the platform vs. variable fee model and the vendor/seller pricing framework for a multi-sided B2B platform.
- Led B2B marketplace delivery for Sysco on Mirakl, including mobile app scope: owned vendor onboarding, catalog taxonomy, and pricing logic in a high-complexity food distribution supply chain; scaled vendor onboarding from approximately 18 vendors in phase one to approximately 40 by phase two, contributing to a marketplace that reached 15,000+ third-party products at launch. Also owned B2B marketplace delivery for Iron Mountain (Spryker) and Orgill (Elastic Path).
- Defined systems of record, integration contracts, API boundaries, and data flows across stacks of 5-10 integrated platforms spanning commerce, PIM (Akeneo, Salsify), OMS (Fluent Commerce), ERP, CRM, payment gateways, and analytics, authoring the technical PRDs and API specifications.
- Owned product scope for replatforming and omnichannel systems integrations using Mulesoft, connecting store, CRM, and fulfillment workflows.
- Authored a full PRD and HLD to expand a Shopify-native cross-border shipping, tax, and duty application to Magento and SFCC (API design, platform-specific checkout hooks, FX strategy, unified backend contracts); brought merchant onboarding to under 5 days across all three platforms.
- Authored API specifications and developer-facing documentation for vendors integrating into the VTEX marketplace, defined partner onboarding flows, and set up sandbox and testing environments ahead of the live launch.
- Designed Role-Based Access Control (RBAC) and Attribute-Based Access Control (ABAC) models for multiple clients, deciding the role/attribute mapping and configuring access policies directly rather than only documenting requirements; made the authorization and SSO decisions for ecommerce marketplace platforms as an ongoing part of their access architecture.
- Built and owned internal B2B SaaS products and tools at Born Group, including Bison, supporting internal team workflows and operations alongside client-facing engagements.
- Led an AR (augmented reality) visualization experience for Delta Faucet, letting customers see how a faucet or fixture would look in their own home before buying; owned mobile app scope for Boost Mobile alongside web and desktop commerce experiences.
- Built interactive prototypes in Figma and Lovable across client engagements for demos, stakeholder validation, and engineering handoff; implemented and managed Adobe Experience Manager (AEM) for content management and digital experience delivery across multiple client accounts.

AI, Data & Evidence-Based Product Strategy

- Led AI personalization strategy across enterprise retail and CPG platforms, connecting customer behavior, recommendation logic, experimentation, and product placement in an AI-driven recommendation layer across homepage, PDP, and cart

(browsing history, purchase patterns, real-time session context) that drove 15% digital revenue growth.

- Identified that click-through rate was a misleading success metric for recommendations and drove alignment to add-to-cart rate and downstream conversion, changing what the data science team's model optimized for and making revenue impact traceable; ran A/B tests iterating on model inputs and product placement simultaneously.
- Partnered with data science to define ranking-signal priority and cold-start handling for new visitors, and phased the rollout, starting with lower-risk homepage recommendations before extending to PDP and cart, where a poor recommendation carries higher cost.
- Built evidence-based prioritization practices with data science and BI teams: A/B experimentation frameworks, north-star metrics, funnel analysis, and staged rollouts that guided roadmap and investment decisions.
- Advised enterprise and small-business clients across retail, finance, healthcare, and manufacturing on AI adoption strategy: setting workable expectations against "AI as magic" perceptions, evaluating subscription-vs-custom-agent trade-offs against token-cost economics, and structuring phased, team-based rollouts (engineering teams first via GitHub Copilot and Claude Code, then broader functions) aligned to each organization's governance, security, and compliance requirements.
- Pioneered GenAI-assisted acceptance-criteria and test-scenario generation within Agile delivery workflows, improving edge-case coverage and reducing validation cycles by approximately 30% across multiple concurrent programs.
- Deployed Dynamic Yield for CDP-driven personalization and A/B experimentation, integrated with Salesforce Marketing Cloud (used extensively for Forever 21 and Shoes.com) and Klaviyo for cross-channel lifecycle marketing automation across global consumer brands.
- Led guest-to-paying-customer conversion initiatives using Amplitude to analyze funnel drop-off and segment behavior, identifying where guest users stalled before converting and informing roadmap prioritization to close the gap; scope included subscription renewals and paywall/user-authorization mechanics.

Growth & Customer Journey Transformation: Omnichannel Retail

- Owned omnichannel strategy for BOPIS (Buy Online, Pickup In-Store) from discovery through post-launch optimization (store inventory visibility on the PDP, in-store pickup at checkout, post-purchase notifications), balancing customer experience, inventory economics, technical feasibility, and rollout risk; delivered 63% net sales improvement, 50% increase in local inventory utilization, and 7% YoY churn reduction.
- Made the call to descope real-time inventory sync in phase one, accepting near-real-time as an interim state to hit the launch timeline without sacrificing accuracy; piloted in select stores to validate inventory accuracy before full rollout.
- Led a holiday gift-with-purchase launch: evaluated a legacy implementation inactive for years and chose a hybrid reuse-and-redesign approach over a full rebuild, cutting development time from about 6 months to 1 month and enabling three additional brand collaborations the following quarter; coordinated marketing, merchandising, OMS, UI/UX, engineering, and QA to hit a hard holiday deadline.
- Led omnichannel rollouts across US and Canada retail store fleets, covering in-store digital tools, fulfillment, fraud prevention, and clienteling/CRM, linking customer experiences across digital and physical channels through data-driven testing and experimentation.
- Integrated RFID inventory signals into digital storefronts, enabling real-time store availability and customer reservation flows and closing the physical-digital inventory gap.

Growth & Customer Journey Transformation: Search, Navigation & Discovery

- Owned search and discovery product strategy across 20+ enterprise brands, defining relevance models, ranking signals, and faceted navigation across Elasticsearch, Algolia, and Bloomreach; implemented catalog taxonomy across SFCC, Shopify, and Magento.
- Reframed an underperforming product category as a structural discoverability problem (validated via heatmaps and behavioral data) rather than a promotions problem, winning marketing and C-level alignment for a navigation redesign over a short-term promotional fix.
- Led a six-phase category navigation redesign, merging redundant categories and improving information architecture, delivering a 30% improvement in category visibility and an 18% increase in overall engagement, validated through multi-stage A/B testing.
- Delivered site-search UX improvements (typeahead, zero-results recovery, synonym expansion, boosting rules) validated through A/B testing; integrated third-party SEO tools and measured organic search performance to inform content, navigation, and site-search decisions.

Healthcare, Fintech & Executive Leadership

- Collaborated with C-level stakeholders on annual planning, P&L, OKRs, and investment prioritization, translating technical trade-offs into executive business cases including cost-benefit analysis and ROI framing.

- Served as the dedicated Product Manager for CareAllies (Cigna), owning the provider portal, claims management, and caregiver portal across HIPAA-regulated healthcare workflows; phase one onboarded all users across the tri-state area.
- Led payment gateway, card product, and installment-payment initiatives for Fairstone Financial, authoring PRDs for banking API integrations across Stripe, Adyen, Affirm, and Afterpay; managed regulatory constraints and coordinated production deployment in a live financial services environment.
- Defined product requirements, owned the banking API integration, and designed the UX for a digital wallet product within Fairstone Financial's payment gateway.
- Oversaw 7-8 junior team members at a time across concurrent eCommerce and marketplace engagements, spanning distributed teams in the US, Canada, and India over several years: assigning work, reviewing output, and holding accountability for delivery quality; served as informal onboarding mentor to 7+ new Born Group colleagues on domain expertise, industry context, and tools.
- Ran user training workshops and product demos during discovery and user training phases, walking stakeholders and end users through new features and workflows to support adoption.
- Created customer-facing content (presentations, user guides, release notes, requirements traceability matrices), supported sales and feature decks, and contributed to initial sales proposals, owning the functionality and features section and requirements traceability matrix within statements of work (SOWs).

EARLIER CAREER

Product Owner | Vlink Inc **April 2017 – January 2018**

- Translated complex financial-services workflows into prioritized feature lists, user stories, acceptance criteria, process flows, traceability matrices, and prototypes for multi-phase digital transformation programs.

Lead Business Analyst | Nextworld Technologies **August 2015 – March 2017**

- Led product discovery, competitive analysis, backlog planning, and end-to-end delivery for Magento-based eCommerce platforms targeting emerging international markets; established Agile delivery practices including JAD sessions, backlog grooming, sprint planning, and roadmap management across multiple concurrent programs; built prototypes for demos, stakeholder validation, and engineering handoff.

Business Test Analyst | CPA Global **November 2011 – April 2013**

- Developed QA frameworks and automated testing processes for enterprise applications, building production-readiness discipline across UAT, edge-case coverage, and validation.

Engineering Intern | Dell **Summer Internship, 3rd–4th Year of Engineering**

- Worked on the Danger/Hiptop project during an undergraduate engineering internship, an early, hands-on introduction to hardware/software product engineering.
- Performed black-box and database testing on consumer games, including Guitar Hero, and tested Facebook games such as Bubble Blast, early QA and testing experience in the gaming industry.

SELECTED BUSINESS OUTCOMES

- 63% net sales improvement, 50% inventory utilization increase, and 7% YoY churn reduction through BOPIS: phased rollout with a key descoping decision that enabled on-time launch.
- 15% digital revenue growth through AI personalization: reframed team measurement from CTR to add-to-cart rate and downstream conversion, directly changing what the model optimized for.
- 30% category visibility improvement and 18% engagement lift: six-phase search and navigation redesign across 20+ enterprise brands, won against pressure for a short-term promotional fix.
- 0→1 VTEX marketplace for ICC: functional MVP with international vendor onboarding, cross-border ordering, and international payments launched in 3 weeks during an already-live Cricket World Cup; set the architecture and documentation standard for later implementations.
- Merchant onboarding cut to under 5 days across Shopify, Magento, and SFCC through a cross-border platform expansion (PRD, HLD, unified backend contracts).

PORTFOLIO, PROJECTS AND AI PRODUCT BUILDS

- **AI Coaching Agent, Production Knowledge & Content Workflow (Product with Pri):** Built for a live commercial coaching business; ingests structured and unstructured content including documents, transcripts, worksheets, and knowledge-base material; owned context architecture, source grounding, workflow logic, prompt design, validation, and human review.

- **AI Manuscript Editor Agent (0→1, self-directed):** Multi-provider AI editorial agent integrating Claude, ChatGPT, and Gemini APIs, providing structured feedback across prose, scene structure, character/dialogue authenticity, and emotional impact for a 73-chapter, 750-page long-form manuscript. Owned product design, multi-provider routing, prompt engineering, structured JSON output schema, chapter tracking, side-by-side review, and PDF/Word export. Discovered a silent-degradation failure mode after 17 editing iterations: despite explicit instructions to flag every change, the model had silently dropped roughly 25 pages and several full sections, and could not restore them once the loss was found, due to context-window limits on how much of the original it retained. Redesigned the product by determining how much authority the AI system should have: bounded editing authority, human-in-the-loop review, and explicit change visibility rather than aggressive autonomous rewriting. Discussed the failure mode directly with a Microsoft Research author whose paper documented the same silent-loss pattern in AI-mediated document workflows (independently corroborated by Microsoft Research's DELEGATE-52 study). v2 roadmap includes persistent memory and track-changes output.
- **Cross-Border Platform Expansion Strategy (Born Group):** Authored a full PRD and HLD to expand a Shopify-native cross-border shipping, tax, and duty application to Magento and SFCC (API design, platform-specific checkout hooks, FX strategy, unified backend contracts); reduced merchant onboarding to under 5 days across all three platforms.
- **API Integration Recovery, Zero-Cost Restoration of a 9-Form Lead Pipeline (Product with Pri):** Diagnosed and resolved an undocumented Zapier–Wix API incompatibility blocking lead capture across 9 forms; restored the full pipeline at no cost with zero rebuilds.
- **Payments Lifecycle Integration Prototype:** Built a hands-on prototype modeled on Klarna's buy-now-pay-later payment lifecycle, separating the lifecycle into distinct testable stages (authorization, capture, cancellation, refund) using Postman and CodePen; mapped frontend user actions to backend transaction outcomes at each state to make integration behavior explicit and stakeholder-communicable.
- **Group Travel Planning, Reimagined with AI (concept product):** Designed an agentic AI consensus engine for group trip coordination; authored a full PRD and built a live interactive prototype covering trip creation, AI itinerary generation, sharing, group voting, and AI-brokered consensus for resolving group disagreement.
- **New Jersey County Home Price Forecasting (DS670 Graduate Project):** Independently built a home price prediction and forecasting system using 20+ years of Zillow Home Value Index data (2000–2022) for New Jersey counties. Built SARIMAX time-series models per county with grid-search hyperparameter tuning (AIC-optimized) to forecast future home values, and benchmarked four regression approaches (Linear Regression, Random Forest, XGBoost, SVM) for price prediction, with Linear Regression performing best ($R^2 \approx 56\%$). Built in Python (pandas, NumPy, statsmodels, scikit-learn, XGBoost, Matplotlib/Seaborn).

CORE COMPETENCIES

Product Strategy & Leadership: 0-to-1 Product Development, Product Vision & Strategy, GTM Strategy, Roadmaps, OKRs, KPIs, Product Discovery, Product Operations, User Research, Journey Mapping, Stakeholder Management, C-Level Communication, P&L Planning, Business Cases, ROI Analysis, Agile/Scrum, Cross-Functional Leadership, User Training Workshops and Demos, Customer-Facing Presentations, Sales Deck Support, Feature Decks, Mentoring and Onboarding, Cross-Geography Team Oversight (US, Canada, India), Sales Proposal Support, SOW Development

Prioritization & Product Decisioning: Feature Lists, Feature Value / Impact Assessment, Feature Prioritization, RICE/MoSCoW, MVP Definition, Scope Trade-offs, Backlog Prioritization, Roadmaps

AI and Machine Learning: AI/ML Product Delivery, LLMs, Generative AI, AI Agents, Agentic Workflow Design, Context Architecture, Knowledge Grounding, Structured & Unstructured Content Ingestion, Document/Transcript Processing, RAG, Prompt Engineering, Structured Outputs, Model Evaluation, Human-in-the-Loop Workflows, Multi-Provider AI Orchestration, AI Adoption Strategy, AI Governance, Token/Cost Economics, Change Management, Personalization Engines, Recommendation Systems, Ranking Signals, Cold-Start Strategy, A/B Testing, Experimentation Frameworks, Anthropic Claude, OpenAI ChatGPT, Google Gemini

Integration and Architecture: REST API Design, HLD, Mulesoft, Systems of Record, Payment Lifecycle, Banking APIs, PIM, OMS, ERP, CRM, AWS, Google Cloud, CI/CD, SDLC, Git, Postman, Zapier, No-Code Automation

Marketplace Platforms: Mirakl, VTEX Marketplace, Spryker Marketplace, Elastic Path, Merchant Onboarding, Vendor Onboarding, Catalog Governance, Multi-Seller Workflows, Pricing Logic, B2B Marketplace, Developer-Facing API Documentation, Partner Onboarding Flows, Sandbox and Testing Environments, Commercial Model Design, Platform vs. Variable Fee Structuring, Vendor/Seller Pricing Frameworks

Automation and Workflow Orchestration: Agentic Lifecycle Automation, Trigger-Based Workflows, User Segmentation, Source Attribution, Workflow Orchestration, System-of-Record Design, Exception Handling, Production Automation, Zapier

Payments and Fraud: Fraud Prevention, Stripe, Adyen, Affirm, Afterpay, PayPal, Banking APIs, Card Products, Payment Lifecycle (Authorization, Capture, Cancellation, Refund), Digital Wallets, Buy-Now-Pay-Later (BNPL)

Security, Access & Governance / Tax and Compliance: Role-Based Access Control (RBAC), Attribute-Based Access Control (ABAC), Authorization & SSO Decision-Making, Access Policy Configuration, HIPAA-Governed Workflows, Data Privacy, Production Controls, Regulatory Compliance, Vertex, Avalara

Search and Merchandising: Elasticsearch, Algolia, Bloomreach, Search Relevance Tuning, Faceted Navigation, Taxonomy, Algorithmic Ranking, Query Optimization, PLP/PDP Optimization, Search UX, Typeahead, Synonym Expansion, Boosting Rules, Zero-Results Recovery, SEO Third-Party Integrations, Organic Search Performance Analytics

Omnichannel and Commerce: BOPIS, RFID Integration, Unified Inventory, SEO, Cross-Channel Journey Design, Checkout Optimization, Ship-from-Store, Endless Aisle, Cross-Border Commerce, Guest-to-Paid Conversion, Subscription Renewals, Paywall/User-Authorization Mechanics

eCommerce Platforms and CMS: Salesforce Commerce Cloud (SFCC), Shopify, Magento / Adobe Commerce, VTEX, Spryker, Elastic Path, SAP Hybris / SAP Commerce, BigCommerce, Drupal, Adobe Experience Manager (AEM), Accessibility Compliance (WCAG)

CDP / Personalization: Dynamic Yield, Salesforce Marketing Cloud, Klaviyo, User Segmentation, Personalized Email Marketing, Marketing Automation, Automated/Triggered Lifecycle Email Engines

Reviews, Loyalty and CRM: Bazaarvoice, Salesforce CRM, Clienteling, Lead Acquisition, Marketing Automation, Email Marketing, Customer Lifecycle, Funnel Optimization

PIM / Content: Akeneo, Salsify, Catalog Governance, Product Attribute and Taxonomy Management

OMS / Fulfillment: Fluent Commerce

AR and Mobile: Augmented Reality (AR) Visualization, Mobile App Product Scope, Mobile Commerce

Analytics: Python, Predictive Modeling, Amplitude, Google Analytics, Tableau, Power BI, SQL, Cohort Analysis, Funnel Analysis, Conversion Analysis, User Segmentation, Heatmap Analysis, North-Star Metrics, A/B Testing

Domains: Enterprise eCommerce, Marketplace Platforms, B2B SaaS, Internal Products and Tools, Healthcare Portals, Fintech and Payments, Enterprise SaaS, B2B, B2C, B2B2C, Adtech and Campaign Management

TOOLS AND TECHNICAL SKILLS

Product Tools: Jira, Confluence, Miro, Figma (hands-on prototyping), Lovable, Productboard, InVision, Balsamiq, Notion, Microsoft Visio, Cursor, Claude Code, GitHub Copilot

Programming and Data: Python, SQL, Predictive Modeling / Regression, Amplitude

Agile Product Delivery: Agile/Scrum, Feature Lists, Feature Prioritization, Feature Value / Impact Assessment, Epics, User Stories, Acceptance Criteria, Definition of Done, Backlog Grooming, Sprint Planning, Requirements Traceability Matrix (RTM), UAT, Release Readiness

EDUCATION AND CERTIFICATIONS

MS, Business Analytics — Saint Peter's University
MBA, Management — IILM
BTech, Computer Engineering — Jaipur Engineering College
Certified Scrum Product Owner (CSPO)
Certification of Competency in Business Analysis (CCBA)
